

Talson to present TAG FNA with enhanced security features at 66th IAA

Venlo, August 17, 2016 - Europe's market leader air cargo semi-trailer manufacturer Talson is once again taking its place in the world's largest commercial vehicle exhibition, 66th IAA Commercial Vehicle Fair in Hannover, Germany between September 22 and 29, 2016.

At the 66th IAA, Talson will exhibit its FNA Class ATP Certified Talson Air-Cargo semi-trailer suitable for pharmlogistics, TAG FNA, providing higher security standards than ever.

On top of the outstanding efficiency it offers during loading and unloading operations, Talson has equipped the TAG FNA with hi-tech electronic and ingenious security features, including an online security management system, to provide its operators the increased security they need during their transportation of valuable goods.

Talson TAG FNA offers the compact solution for the transport of temperature controlled air-cargo, flowers or pharmaceuticals.

With its light and insulated upperstructure, TAG FNA enables transportation within the temperature range from 0°C to +12°C. While Talson's self-supporting upperstructure and KTL-coated light chassis offer a higher loading capacity, its concorde roof provides an optimum overall height.

Equipped with four rows of rolling tracks, TAG FNA, optimizes loading and unloading operations while offering the highest product life. For increased load security, the TAG FNA comes with the 'Roller bed Auto-down Safety Function', that lowers the rolling tracks automatically when the semi-trailer sets in motion.

Talson will be at **Hall 27, Stand E07** to present its unique product range and trailer solutions.
